This successful national competition winning scheme is a largely single storey proposal but which includes a centralized second storey offering an efficient, flexible design to accommodate the diverse needs of primary care and the ever-changing modus operandi of medical services provision and delivery.

Multi user facility comprising doctors surgery, dental suite, counselling, podiatry, PCT and pharmacy.

The adopted approach provides an easy to use and manageable building, clearly zoned in terms of use activity that can be operated as a cohesive unit but with each element able to be segregated from the core activity, and used, out of hours for example.

Contemporary design based around a central courtyard waiting space with an atrium and short stub corridors.
