Successful national competition entry project for centralisation and expansion of four independent medical facilities including: three GP surgeries, PCT clinics and potential 'shared' facilities to serve the patient population and reduce the necessity for hospital referral.

Prominent regeneration site on the banks of the River Calder adjacent to the town centre of Brighthouse, calling for a landmark building. Main building accommodation over four floors with a further three storeys of basement car parking, the habitable space will total some 6300sq.m.

The main building will also house Health Food Café and other associated retail plus conversion of existing building and expansion for Pharmacy.

The interior of the building benefits from large-scale atrium spaces to the main patient areas, with views across the river from the main waiting spaces.

The building design will exceed the latest Building Regulations and embrace various environmental strategies. The building design is a high quality contemporary solution complementing the surroundings and history of the town and provides a catalyst for the redevelopment of the river banks through Brighthouse, and more generally the town.
