New Primary Care Centre - Lytham St. Annes, Lancashire

Forming the centrepiece of a wider redevelopment of Lytham Hospital the scheme offers a clean, crisp, contemporary interior that further compliments the award-winning design.

Accommodation is spread over three storeys and provides a total floor area in excess of 4,500m². Facilities provided include a series of GP Consulting Rooms and Treatment Suites which are further supported by a range of PCT services, a pharmacy and a healthy-eating café.

Following the original design concept of providing a central core to the facility the scheme adopts a cruciform plan format with a series of wings that are all accessed from the heart of the building.

Central to the scheme is a full-height atrium that floods the heart of the building with daylight and maximizes the opportunity of natural ventilation, thereby demonstrating that the environmental principles are not necessarily complicated to achieve.
